FACILITY: DECnet-VAX Network Management Listener

ABSTRACT:

This module contains the NPARSE state tables for processing the NCP SET and DEFINE command message parameters.

ENVIRONMENT: VAX/VMS Operating System

AUTHOR: Distributed Systems Software Engineering

CREATION DATE: 6-November-1979

MODIFIED BY:

MKP0020

Kathy Perko

25-Mar-1984

Fix area 1 problem. Convert area 0 to area 1 for Phase IV

NCPs and to the executor's area for Phase III NCPs.

Fix SET X29-SERVER DEST FOO NODE BAR so that the node

parameter uses the node parameter ID instead of the counter V03-012 MKP0020 timer parameter id.

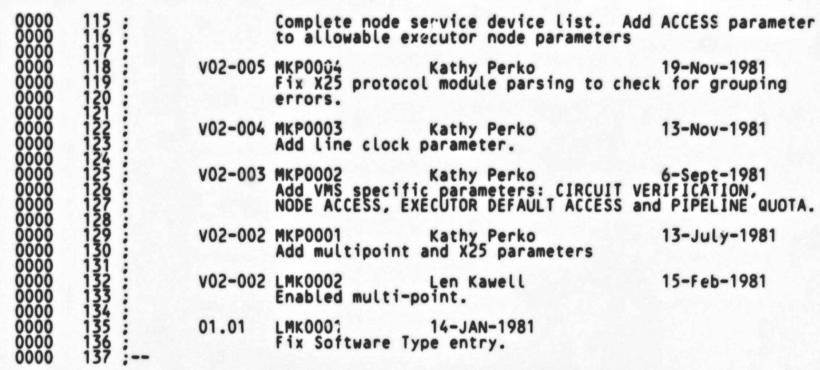

V03-011 MKP0019 Kathy Perko 10-Jan-1984 Add X25 Access Module entity parameters.

7-Jan-1984 V03-010 MKP0018 Kathy Perko Add node parameter SERVICE NODE VERSION.

The working set limit was 3450 pages.
695256 bytes (1358 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1521 non-local and 0 local symbols.
2450 source lines were read in Pass 1, producing 109 object records in Pass 2.
35 pages of virtual memory were used to define 32 macros.

Macro library statistics !
